

IN THE ABSTRACT:

~~Abstract~~ABSTRACT OF THE DISCLOSURE

There is provided a method for adapting the configuration of at least one application of a mobile terminal device to an accessible data connection, by the steps of ~~[[:-]]~~ obtaining properties of at least one data connection accessible from said mobile terminal device; and ~~[[:-]]~~ adapting the configuration of said application on said terminal device in accordance with said properties. Further, there is provided a mobile terminal device capable of adapting the configuration of applications to an accessible data connection, ~~comprising~~comprising ~~[[:-]]~~ data exchanging means, capable of accessing at least one data connection; ~~[[:-]]~~ data processing means, capable of running applications; ~~[[:-]]~~ means for obtaining properties of at least one data connection accessible by said data exchanging means; and ~~[[:-]]~~ means for adapting the configurations of at least one application according to said obtained properties.
